REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The prior art did not disclose or suggest a greenhouse comprising an exterior wall structure which includes primarily transparent panels allowing entry to an interior of natural light; a plurality of elongate benches located within the interior and arranged to provide support surfaces for supporting crop materials thereon for receiving the natural light and growing within the interior; in combination with an air handling system for conditioning the air within the interior including at least one air moving fan, at least one interior air intake, at least one interior air outlet, at least one exterior vent and at least one component for changing air temperature; the exterior wall structure including a first side wall and a second side wall opposite to the first side wall with each of the first and second side walls defined by a plurality of vertical posts at spaced positions along the length of the side wall defining equal spans between each of the plurality of vertical posts and the next with transparent panels arranged to substantially fill the span between the plurality of vertical posts; each bench having a bench support for the bench located underneath the bench; the benches being arranged at spaced positions along the first side wall such that each bench has one end adjacent said first side wall such that the bench and the bench support therefor each extend from the first side wall at right angles thereto toward the second side wall; each bench being associated with a respective one of the spans such that the number of spans is equal to the number of the plurality of benches and such that the bench support of each bench is located between the plurality of vertical posts of the associated respective one of the spans; wherein the air handling system consists of a plurality of separate air handling systems

each air handling system of the plurality of air handling systems being associated with a respective one of the benches of the plurality of benches and each air handling system of the plurality of air handling systems including a fan, at least one air intake below the respective bench of the plurality of benches and at least one air outlet above the respective bench of the plurality of benches.

Nor did the prior art disclose or suggest a greenhouse comprising an exterior wall structure which includes primarily transparent panels allowing entry to an interior of natural light; a plurality of elongate benches located within the interior and arranged to provide support surfaces for supporting crop materials thereon for receiving the natural light and growing within the interior; an air handling system for conditioning the air within the interior including at least one air moving fan, at least one interior air intake, at least one interior air outlet, at least one exterior vent and at least one component for changing air temperature; the exterior wall structure including a first side, a second side wall opposite to the first side wall a third side wall and a fourth side wall at right angles to the first and second side walls, with each of the side walls defined by a plurality of vertical posts at spaced positions along the length of the side wall defining equal spans between each of the plurality of vertical posts and the next with transparent panels arranged to substantially fill the span between the plurality of vertical posts; the benches being arranged at spaced positions along the first side wall such that each bench has one end adjacent said first side wall and extends therefrom at right angles thereto toward the second side wall, each bench being associated with a respective one of the spans between the plurality of vertical posts of said first side wall and arranged such that the number of spans is equal to the number of the plurality of benches; wherein the air handling system for conditioning the air

within the interior includes wiring and piping for supplying electrical power and air conditioning fluid for changing the air temperature; wherein each of the side walls includes a plurality of bottom non-transparent wall panels arranged in the span between each pair of the plurality of vertical posts, each non-transparent transparent panels; and a sill at the bottom of the transparent panels extending outwardly of the plurality of vertical posts; and wherein each of the plurality of non-transparent wall panels is located at a position spaced outwardly of outside surfaces of the plurality of vertical posts to define a channel inside the non-transparent wall panels and outside the plurality of vertical posts and below the sill for receiving said wiring and piping.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
